Bitdeer (BTDR)

Josh, earnings desk

3Q26 | Earnings Update | Post-call version | 11 November 2026

Post-call version (replaces the 10 November pre-call version). No knowledge base detected; built from web-retrieved documents (SEC 6-K releases, two call transcripts). History limited to 3Q25, 2Q26 and 3Q26. Signed: Josh (analysis); Trevor (transcript work); Scott (scorecard).

1 Executive snapshot

Consensus thesis	Investors own Bitdeer for converting owned power into contracted AI revenue with mining cash flow alongside, and avoid it for losses, dilution and doubts over funding and tenant credit at Tydal (Provisional, from the 5 November preview).
Thesis status	**Monitoring**
Versus expectations	Quarter: beat on revenue ($320.7mn vs about $251.1mn consensus per Investing.com); miss on EPS (-$0.46 vs -$0.37); no EBITDA consensus (EBITDA $69.6mn vs $31.1mn in 2Q). Outlook: no formal guidance; 2026 crypto capex at or below $200mn (low end of $200-280mn); 2027 capex and AI Cloud guidance deferred to 4Q results. Stock closed at $6.41 on 10 November (AAII).
Biggest changes	• Customer prepayments funded the quarter: deferred revenue added $263.8mn to operating cash flow (balance $341.9mn, 'mostly AI cloud prepayments'), turning it positive at $6.0mn. • Capex $478.0mn (about $368mn data centers and GPUs); cash and restricted cash fell to $213.7mn from $496.3mn. • Call: Tydal letters of credit (~$1.3bn, years 1-6) still 'expected to be issued' by two unnamed banks; management says Volta's GPU financing removed the last major item, leaving construction completion and GPUs working. • Call: Tydal project financing started, at least $500mn, secured on contracted rent; no lender, coupon, recourse or date. Equity raise in 4Q26 or 1Q27 not ruled out; ATM wound down early in 3Q. • Related-party borrowings $738.6mn, $666.5mn current, against $213.7mn of cash; maturity and rollover not addressed on the call.
Investor takeaway	**The call confirmed Tydal's timing but left funding open, so the consensus view should tilt further toward funding risk: the $1.3bn of letters of credit are still only 'expected', Tydal project debt is sized at 'at least $500mn' with no lender or price, an equity raise was not ruled out, and the maturity of $667mn of current related-party debt went undiscussed.**
Monitor next quarter	• Tydal letters of credit issued and phase 1 handed over by year-end, with customer installation from January. • Tydal project debt priced (size, coupon, recourse) and the related-party maturity schedule disclosed or extended. • 4Q26 results: 2027 capex, AI Cloud revenue and margin guidance; AI Cloud revenue above 3Q's $20.4mn.

2 Key changes this quarter

Pillar scorecard

Pillar	What the market assumed	What the quarter showed	Verdict	Source
P1 Tydal delivers with credit support	First halls in 4Q26; $1.3bn LCs issued	Phase 1 'on schedule for year-end'; customer installs from January; phase 2 from end-1Q27. Call: ~$1.3bn LCs 'expected to be issued' by two unnamed banks; no rent-start date.	Unresolved	Release; call
P2 Non-dilutive funding	Project debt pays most of Tydal capex	No project debt yet. Prepayments ($263.8mn) and BTC sales ($221.5mn) funded capex; cash -$282.6mn. Call: Tydal financing 'at least $500mn' started, terms undisclosed; equity raise not ruled out.	Challenged	Cash flow; call
P3 AI Cloud converts backlog	ARR ramps; backlog holds at $2.9bn	AI Cloud revenue $20.4mn, +46% QoQ; backlog about $2.9bn; about 332 IT MW secured. Most capacity delivers 2Q27 to 1Q28.	Confirmed	Release, site table
P4 Mining funds the bridge	Revenue about $248mn; gross margin above -3.7%	Revenue $320.7mn; gross margin 3.4%; EBITDA $69.6mn. Operating loss $58.9mn and EPS miss.	Confirmed	Release; Investing.com

Pillar	What the market assumed	What the quarter showed	Verdict	Source
P5 Site options have value	A US site is leased or dated	No new US lease. Knoxville cut to 55 MW and 4Q27, Wenatchee 2H28 (site table); neither mentioned on the call. Rockdale awaits more grid power; Weathersfield faces local opposition.	Challenged	Site tables; call

What management emphasized

More: AI neocloud leads the company description; backlog and 'IT MW secured' headline the release; prepayments named as a funding source. Less or dropped: SEALMINER external sales and hosting; BTC held down to 47 (150 in 2Q); no mention of the $1.3bn LCs or the buyback in the release. KPIs gaining weight: deferred revenue, current related-party debt, IT MW by delivery quarter.

Call: management leaned on contracted value (Tydal $4.7bn plus $2.9bn AI Cloud backlog, about $7.6bn) and 'over $10bn' including deals under negotiation, which are not binding. The $100mn buyback announced 8 October was not mentioned.

→ The story is now 'contracted AI revenue'; the gap is between contracted value and financed value.

Analyst focus matrix (Trevor)

Topic	Analysts, 10 Nov call	Status	Answer
Power and sites	Giles (B. Riley); Cremo (Barclays); Colonnese (HCW); Todaro (Needham); Lewis (BTIG); Grondahl (Northland); Glagola (KBW)	Persistent	Mostly direct; no MW or dates for Rockdale
Capex and funding	Giles; Cremo; Todaro; Grondahl	Rising	Partial: financing sized (at least $500mn), not priced; equity not ruled out
Delivery / AI Cloud ramp	Colonnese	New	Deflected to 4Q guidance
Pricing and margins	Kinstlinger (AGP)	New	Deflected to 4Q
Bitcoin mining	Kinstlinger; Dede (JonesTrading)	Fading	Direct; capex slows in 2027
Competition (Malaysia vs US)	Dede	New	Direct: Malaysia avoids US build timelines
Customer credit, cost of debt, related-party loans, GPU residual	None	Gap	Not asked

Earlier calls' Q&A was not retrieved on this run; status compares with the preview's debates. Prepayments' share of GPU capex heard as 'well above 50%' (Motley Fool) and 'about 50%' (Investing.com): single-source wording.

Trevor's watch-list

No analyst named by CK; I chose Mike Grondahl (Northland) because he asked for the size of the Tydal financing. 3Q26: asked remaining Tydal spend and the size of the financing. Answer: about $500mn left; raise at least $500mn, possibly more to recoup equity (direct on size; no lender or terms). Next evidence: the priced Tydal loan. Also watch John Todaro (Needham) on equity: management would not commit to avoiding a raise; Nick Giles (B. Riley) on how much capex prepayments cover. — Trevor

3 KPI dashboard

Metric	3Q26	2Q26	3Q25	Flag	Trend
Revenue ($mn)	320.7	228.8	169.7	[↑]	+40% QoQ, +89% YoY
AI Cloud revenue ($mn)	20.4	14.0	1.8	[↑]	+46% QoQ; 6% of revenue
Gross margin	3.4%	-3.7%	23.4%	[↑]	Positive again
Adj. EBITDA ($mn) / margin	69.6 / 21.7%	31.1 / 13.6%	25.5 / 15.0%	[↑]	Doubled QoQ
Operating margin	-18.4%	-44.5%	-7.7%	[↑]	Still negative
Interest expense ($mn) / % revenue	34.3 / 10.7%	32.5 / 14.2%	20.2 / 11.9%	[↓]	Rising in dollars

Metric	3Q26	2Q26	3Q25	Flag	Trend
Net loss ($mn) / EPS	-125.5 / -0.46	-92.3 / -0.37	-30.1 / -0.14	[↓]	Incl. -$54.6mn BTC loan mark
Self-mining hash rate, period end (EH/s)	82.3	73.0	35.0	[↑]	15.4 J/TH
BTC mined	3,855	2,694	1,109	[↑]	+43% QoQ
AI Cloud backlog / IT MW secured	$2.9bn / ~332	n.a. / 141.4 (Jul, monthly update)	n.a.	[↑]	Jul figure from preview (single source)
Capex, cash ($mn)	478.0	266.0	59.7	[↓]	~$368mn DC and GPU
Operating cash flow ($mn)	6.0	-158.5	-520.4	[↑]	Prepayment-driven
Deferred revenue ($mn)	341.9	115.2	n.a.	[↑]	Customer advances
Cash and restricted cash ($mn)	213.7	496.3	217.2	[↓]	-$282.6mn QoQ
Total borrowings ($mn)	1,948.5	1,841.7	n.a.	[↓]	Sum of balance-sheet lines
Related-party borrowings / current ($mn)	738.6 / 666.5	633.1 / 491.0	n.a.	[↓]	Short tenor
Shares outstanding, A+V (mn)	276.2	271.8	n.a.	[↓]	+1.6% QoQ

Flags: [↑] better, [↓] worse, [~] within ±5%, [?] unavailable. For cost, debt and share lines ↓ means worse for shareholders. Borrowings, related-party totals and deferred revenue are our sums of balance-sheet lines. Sources: 3Q26 and 2Q26 releases (6-K).

4 Guidance analysis

Metric	Guidance	vs. prior	vs. consensus	Mgmt explanation	Analyst read
Tydal phase 1 (60.5 IT MW)	4Q26	Maintained	In line	'Remains on target'	On schedule for year-end per call; no rent-start date (Cremo, Barclays)
Tydal phase 2 / 3	1Q27 / 2H27	Maintained	n.a.	Phase 3 shown as 42.7 IT MW	Phase 2 halls from end-1Q27 per call
Knoxville (55 MW)	4Q27	Lowered (was 3Q27, 86 MW)	n.a.	Power equipment delays	Not discussed on call
Wenatchee (8.5 MW)	2H28	New date (was TBU, 13 MW)	n.a.	Redesign to simplify permits	Not discussed on call
Rockdale +179 MW	4Q26 phased	Narrowed (was 2026, in planning)	n.a.	Construction underway	More grid power pending, possibly within a year (Giles, B. Riley)
Malaysia A90110 / A20210 / A10310	2Q27 / 3Q27 / 1Q28	New	n.a.	New services agreements	Call (prepared): A901 ready 2Q27, A202 3Q27, A103 1Q28; Dede asked on Malaysia vs US
Revenue, EBITDA, capex	None given	n.a.	n.a.	No formal guidance	2027 capex and AI Cloud guidance with 4Q; ramp and margins deflected (Colonnese, Kinstlinger)
2026 crypto capex	At or below $200mn	Low end of $200-280mn	n.a.	Capital directed to contracted AI and HPC projects while financing completes	Wafers tight; SEALMINER capex slows in 2027 (Kinstlinger, Dede)

Underlying economic performance: improving at the EBITDA line on mining scale, still loss-making after depreciation and interest, and dependent on financing that the call described but did not price.

5 Strategic / moat evolution

Dimension	Condition	Direction	Key observations	Investment implication
Power access	Strong	Stable	1,747.7 MW online; 1,373.3 MW pipeline; $47/MWh	Power is the asset; conversion is the question
Tenant credit	Weak-moderate	Unresolved	Volta (smaller, unrated per preview) with no-fee exit at year 10; LCs undisclosed	Rent only financeable with credit support
Cost of capital	Weak	Worsening	Related-party BTC loans; converts; ATM equity (stock near 52-week low in preview)	Next dollar is expensive
Delivery speed	Mixed	Worsening (US)	Tydal on time; Knoxville, Wenatchee slip	US options worth less, later
Vertical stack (SEALMINER)	Strong in mining	Improving	15.4 J/TH fleet; inventory moved to own use	Mining cash flow, not chip sales
GPU supply	Moderate	Improving	GB300 racks ordered for Malaysia	Owned-GPU residual risk on Bitdeer

5-10 years: power is the asset; becoming an AI landlord depends on financing Tydal and Malaysia below their returns, and today the funding mix (related-party, short tenor) does not match 10-16 year assets.

6 Major risks and changes

Risk	Prior	Current	Direction	Implication
Funding and refinancing	High	High	Up	$666.5mn related-party debt current vs $213.7mn cash
Tenant credit (Volta)	High	High	Flat	LCs still 'expected'; Volta's GPU financing cleared the last major item, per call; year-10 exit caps debt sizing
Delivery and construction	Medium	Medium	Up	Two US sites slipped; A10210 and A20110 moved one quarter; Malaysia delivers 2027–28
Bitcoin price and hash price	High	High	Flat	$54.6mn BTC-loan mark; BTC collateral posted to related party
Dilution	High	High	Flat	ATM $58.0mn in 3Q then wound down; equity raise in 4Q26/1Q27 not ruled out; buyback not mentioned
Permitting (Norway, US; Clarington suit)	n.a.	Medium	Up	Norway rules to slow new builds; Ohio site faces local opposition (call)

Concern → response → evidence

Concern	Response	Evidence
Can Bitdeer fund Tydal without heavy dilution?	Tydal project debt of at least $500mn secured on rent, plus prepayments and GPU financing; equity not ruled out (call)	Deferred revenue +$263.8mn in cash flow; no project debt disclosed; cash -$282.6mn
Is mining still a drag?	Record revenue, EBITDA +173% YoY	Gross margin 3.4%; operating margin -18.4%; power cost $47/MWh
Is related-party funding stable?	Release explains the BTC-collateralized loan and its mark, not maturity or rollover	$666.5mn current; BTC loan marked -$54.6mn; $321.7mn BTC posted and $140.3mn returned in 3Q

7 Capital, funding and per-share impact

Period	Capex	Op. cash flow	Funding gap	Debt (net)	Equity (ATM)	Prepay (def. rev.)	Net debt	Shares (mn)
2Q26	266.0	-158.5	424.5	Borrowings and ATM $517.3mn net proceeds; repaid $90.0mn	incl. above	n.a.	1,345.4	271.8
3Q26	478.0	6.0	472.0	-92.3 cash (balance +105.4)	58.0	+263.8 (in OCF)	1,734.8	276.2

$mn. Funding gap = capex less operating cash flow; 3Q gap met by $221.5mn BTC sales, $58.0mn ATM and $282.6mn cash drawdown, less $92.3mn net related-party repayment. Net debt = borrowings less cash and restricted cash (our sums). At least $666.5mn of related-party debt is current; converts (~$1.2bn, 4-5.25%) none due before December 2029. Remaining Tydal capex was given as ~$250mn, ~$350mn and ~$500mn on the call (unreconciled).

8 Monitoring checklist

Signals: Tydal phase 1 rent start date; LC issuance and bank names; Project debt size, coupon and recourse; Related-party maturity schedule; AI Cloud revenue and deferred revenue drawdown. Risks building: Short-tenor related-party debt against long-lived assets; owned-GPU exposure in Malaysia; rising power cost. Confirmation: Tydal billing in 4Q26 with LCs in place; project debt at a single-digit coupon; related-party debt termed out. Tripwires: Tydal installs slip past January or LCs not issued by 1Q27; LCs not issued; a large ATM draw or discounted equity raise; related-party lender demands repayment.

Questions for owners (post-call)

Question	Why it matters	Asked on call?
The Tydal lease announced in August anticipated $1.3bn of letters of credit; today's release says Tydal is 'on target' but is silent on them. Have they been issued, by which banks, and does phase 1 rent start in 4Q26 if they have not? Follow-up: yes or no, are they issued today?	Credit: decides whether the $4.7bn lease is financeable.	Indirectly (Cremo): described as 'expected to be issued' (our inference: not yet issued); no banks or date
$666.5mn of related-party borrowings are current against $213.7mn of cash. What is the maturity schedule, and is rollover committed in writing? Follow-up: what is the coupon?	Credit: refinancing risk on short-tenor money.	Not asked
'Complete our financings' is a stated priority. What size, lender, coupon and recourse for Tydal and Malaysia, and by what date? Follow-up: is any of it parent-guaranteed?	Credit: cost of the next dollar.	Partly (Grondahl): at least $500mn; no lender, coupon, recourse or date
Deferred revenue added $263.8mn to operating cash flow. Which customers and sites, and how much is refundable if Malaysia delivery slips from 2Q27?	Equity and credit: prepayments are only cheap capital if they stick.	Partly (Giles): cover well above half of GPU capex; customers and refundability not addressed
Knoxville was cut from 86 to 55 MW and moved to 4Q27 on equipment delays. Does the same equipment risk touch Rockdale's 179 MW, due from 4Q26?	Equity: tests delivery credibility.	Not asked; Knoxville not mentioned
You sold $58.0mn on the ATM in 3Q and announced a $100mn buyback on 8 October. How much has been sold or bought since 30 September, at what price?	Equity: dilution and per-share value.	Partly (Todaro): ATM wound down early 3Q; buyback not mentioned

Still open for owners: issuance date of the LCs; related-party maturity and coupon; Tydal loan terms; refundability of prepayments if Malaysia slips.

Read-across for Kona

→ Customer prepayments did what project debt has not yet done for Bitdeer: $263.8mn of advances funded most of this quarter's about $368mn of data center and GPU capex, and management expects prepayments to cover about half or more of the related GPU capex. Kona can ask hosting or GPU-cloud customers for upfront payments to bridge to project debt. Tydal shows the limit: three months after signing, a rent of about $202/kW-month from an unrated tenant still waits on bank letters of credit before it can be financed. Kona should make letters of credit or a parent guarantee a condition of signing, not a later step.
