Bitdeer (BTDR)

Josh, earnings desk

3Q26 | Earnings Brief | Post-call version | 11 November 2026

Post-call version (replaces the 10 November pre-call version). No knowledge base detected; built from web-retrieved documents (SEC 6-K releases, two call transcripts). History limited to 3Q25, 2Q26 and 3Q26. Signed: Josh (analysis); Trevor (transcript work); Scott (scorecard).

1 Executive snapshot

Consensus thesis	Investors own Bitdeer for converting owned power into contracted AI revenue with mining cash flow alongside, and avoid it for losses, dilution and doubts over funding and tenant credit at Tydal (Provisional, from the 5 November preview).
Thesis status	**Monitoring**
Versus expectations	Quarter: beat on revenue ($320.7mn vs about $251.1mn consensus per Investing.com); miss on EPS (-$0.46 vs -$0.37); no EBITDA consensus (EBITDA $69.6mn vs $31.1mn in 2Q). Outlook: no formal guidance; 2026 crypto capex at or below $200mn (low end of $200-280mn); 2027 capex and AI Cloud guidance deferred to 4Q results. Stock closed at $6.41 on 10 November (AAII).
Biggest changes	• Customer prepayments funded the quarter: deferred revenue added $263.8mn to operating cash flow (balance $341.9mn, 'mostly AI cloud prepayments'), turning it positive at $6.0mn. • Capex $478.0mn (about $368mn data centers and GPUs); cash and restricted cash fell to $213.7mn from $496.3mn. • Call: Tydal letters of credit (~$1.3bn, years 1-6) still 'expected to be issued' by two unnamed banks; management says Volta's GPU financing removed the last major item, leaving construction completion and GPUs working. • Call: Tydal project financing started, at least $500mn, secured on contracted rent; no lender, coupon, recourse or date. Equity raise in 4Q26 or 1Q27 not ruled out; ATM wound down early in 3Q. • Related-party borrowings $738.6mn, $666.5mn current, against $213.7mn of cash; maturity and rollover not addressed on the call.
Investor takeaway	**The call confirmed Tydal's timing but left funding open, so the consensus view should tilt further toward funding risk: the $1.3bn of letters of credit are still only 'expected', Tydal project debt is sized at 'at least $500mn' with no lender or price, an equity raise was not ruled out, and the maturity of $667mn of current related-party debt went undiscussed.**
Monitor next quarter	• Tydal letters of credit issued and phase 1 handed over by year-end, with customer installation from January. • Tydal project debt priced (size, coupon, recourse) and the related-party maturity schedule disclosed or extended. • 4Q26 results: 2027 capex, AI Cloud revenue and margin guidance; AI Cloud revenue above 3Q's $20.4mn.

2 Pillar scorecard

Pillar	What the market assumed	What the quarter showed	Verdict	Source
P1 Tydal delivers with credit support	First halls in 4Q26; $1.3bn LCs issued	Phase 1 'on schedule for year-end'; customer installs from January; phase 2 from end-1Q27. Call: ~$1.3bn LCs 'expected to be issued' by two unnamed banks; no rent-start date.	Unresolved	Release; call
P2 Non-dilutive funding	Project debt pays most of Tydal capex	No project debt yet. Prepayments ($263.8mn) and BTC sales ($221.5mn) funded capex; cash -$282.6mn. Call: Tydal financing 'at least $500mn' started, terms undisclosed; equity raise not ruled out.	Challenged	Cash flow; call
P3 AI Cloud converts backlog	ARR ramps; backlog holds at $2.9bn	AI Cloud revenue $20.4mn, +46% QoQ; backlog about $2.9bn; about 332 IT MW secured. Most capacity delivers 2Q27 to 1Q28.	Confirmed	Release, site table
P4 Mining funds the bridge	Revenue about $248mn; gross margin above -3.7%	Revenue $320.7mn; gross margin 3.4%; EBITDA $69.6mn. Operating loss $58.9mn and EPS miss.	Confirmed	Release; Investing.com
P5 Site options have value	A US site is leased or dated	No new US lease. Knoxville cut to 55 MW and 4Q27, Wenatchee 2H28 (site table); neither mentioned on the call. Rockdale awaits more grid power; Weathersfield faces local opposition.	Challenged	Site tables; call

3 Key KPIs

Metric	3Q26	2Q26	3Q25	Flag	Trend
Revenue ($mn)	320.7	228.8	169.7	[↑]	+40% QoQ, +89% YoY
AI Cloud revenue ($mn)	20.4	14.0	1.8	[↑]	+46% QoQ; 6% of revenue
Gross margin	3.4%	-3.7%	23.4%	[↑]	Positive again
Adj. EBITDA ($mn) / margin	69.6 / 21.7%	31.1 / 13.6%	25.5 / 15.0%	[↑]	Doubled QoQ
Operating margin	-18.4%	-44.5%	-7.7%	[↑]	Still negative
Interest expense ($mn) / % revenue	34.3 / 10.7%	32.5 / 14.2%	20.2 / 11.9%	[↓]	Rising in dollars
Net loss ($mn) / EPS	-125.5 / -0.46	-92.3 / -0.37	-30.1 / -0.14	[↓]	Incl. -$54.6mn BTC loan mark
Self-mining hash rate, period end (EH/s)	82.3	73.0	35.0	[↑]	15.4 J/TH
BTC mined	3,855	2,694	1,109	[↑]	+43% QoQ

Flags: [↑] better, [↓] worse, [~] within ±5%, [?] unavailable. For cost, debt and share lines ↓ means worse for shareholders. Borrowings, related-party totals and deferred revenue are our sums of balance-sheet lines. Sources: 3Q26 and 2Q26 releases (6-K).

4 Guidance (key metrics)

Metric	Guidance	vs. prior	vs. consensus	Mgmt explanation	Analyst read
Tydal phase 1 (60.5 IT MW)	4Q26	Maintained	In line	'Remains on target'	On schedule for year-end per call; no rent-start date (Cremo, Barclays)
Tydal phase 2 / 3	1Q27 / 2H27	Maintained	n.a.	Phase 3 shown as 42.7 IT MW	Phase 2 halls from end-1Q27 per call
Knoxville (55 MW)	4Q27	Lowered (was 3Q27, 86 MW)	n.a.	Power equipment delays	Not discussed on call

Underlying economic performance: improving at the EBITDA line on mining scale, still loss-making after depreciation and interest, and dependent on financing that the call described but did not price.

5 Top risks and analyst focus

(1) Funding and refinancing: $666.5mn related-party debt current vs $213.7mn cash; Tydal loan unpriced. (2) Tenant credit: Tydal LCs still not issued; Volta has a no-fee exit at year 10. (3) Dilution: equity raise not ruled out for 4Q26/1Q27; stock $6.41.

Analyst focus (Trevor): nine analysts, mostly on power and sites and funding; AI Cloud ramp and margins deflected to 4Q; nobody asked about customer credit, cost of debt or the related-party loans. Watch-list: Grondahl (Northland), Todaro (Needham).

6 Questions for owners

(1) When are the Tydal LCs issued, and by which banks? (2) Related-party maturity schedule and coupon? (3) Tydal loan lender, coupon, recourse and date? (4) Prepayment customers and refundability? (5) Knoxville equipment risk at Rockdale?

7 Read-across for Kona

Customer prepayments did what project debt has not yet done for Bitdeer: $263.8mn of advances funded most of this quarter's about $368mn of data center and GPU capex, and management expects prepayments to cover about half or more of the related GPU capex. Kona can ask hosting or GPU-cloud customers for upfront payments to bridge to project debt. Tydal shows the limit: three months after signing, a rent of about $202/kW-month from an unrated tenant still waits on bank letters of credit before it can be financed. Kona should make letters of credit or a parent guarantee a condition of signing, not a later step.
